Kerry-Ann: It is an ongoing. I do spend a fair amount of time in preparation, but sorry repeat you question, I'm a bit lost.

created those debriefing questions and handed them out to quietly reflect and then go into a larger group to a debriefing.

DanReeve

It sounds like you have like despite this coming a little bit late, I mean becauserof yo previous experience, you knowou've got a pretty good ... for someonwho's just started "Oh, off the top of my head." Then you're walking through a fairly developed set of approaches, like a fairly developed path which I think will be informative to anyone who says, "It's only informative for me." I want to move on a little bit and tie this into one of the key aspects that I think in some ways is the one of the touchstones probably for all of Camosun whether people are aware of like applied leargnor the principles that are up, tis the idea of authenticity that creating some kind of a connected experience or event in whatever disciplintent makes students feel like this connects to the real world of their discipline, herever that touches. I guess my question is what is it about your., the way you set up your student experience that ties it to the most current and foundational elements of your profession?

KerryAnn:

Authenticity I think is synonymous within my stimulation background with realised that brings authenticity. I can say within resignu, I've spent a lot of time on developing that. In the Sim realm we use simulators which are giant robots and which the simulator is male and I never actually used my female voice with a simulatorally tried to draw students into the experience. On a very basic level, like if a student was going to put on nasal prongs on the simulator, the minute they touch the nose I'll say! thattickles."

KerryAnn:

Then there's this connection throughat inanimate objecto try to bring them into the experience. Within the theory class, I've done that with the Improvion a little bit. I get the students and I think that the characters that I take on, I have to say I think some of the authenticity comes from some of my nursing experience and pulling from those experiences to develop characters that are realistic.

DanReeve

A hybridity of your past experiences as a nurse and kind of pulling those forward.

KerryAnn:

Totally. Yeah.

DanReeve

Okay. Well, let's move on to a piece you've kind of already talked about and it's vital both for students and for faculty want, I want to put it in the lens of factor and that's the ideaof reflection. When and how do you reflect on an applited rning activity and like do you have, do you have a pattern for that or is it what, how do you, as you're teaching this, this third year course for the first time, what's nyprocess of reflection

Kerry-Ann: For my own reflection

DanReeve

Yeah your own reflectior Even when you're preparing, I don't just mean maybe now, but also in those moment weeks, let's pretend mile that you had to plan this activity, what was your reflective practice throughout?

KerryAnn:

I'm always wondering what students take away from it. Essentially that's what we want from these activities. We want to not have these activities that are for now want

principles of the first iternal principles that we've covered so far, they're notated wall. Of course when we talked about reflection, we're also going to be talking about student reflection. Now we are going to focus a little more on the student experience, but also the student experience is mediated in some ways through our experiences. Teachers, we will hopefully set up the environment so that they are having that best possible experience. We want to talk a little bit about orientation and training and engagement. This is kind of the preparation you take to get the students ready for an applied learning approach.

DanReeve

I think it's interesting in this class you've taken because maybe it had a history as, like I teach a theoryclass, ti has a history of being anybe not as practical or may lodey. I wanted to know like how do you expin the applied learning approach to your students? You may not even use that language, how do you explain why are we doing this? Why are we doing it this way? How do you connect that to the two they without? You've said it already, I would call it meditea chip to the third this possible to the third this possible that they will be the total think they will be the total think they will be the total think they will be the total total think they will be the total total think they will be they will be the total total they will be they will be

Kerry-Ann: They talk about team learning, mutuality, respect, confidentiality. It's the ground rules

and on a more basic level, opendrt, open mind. I think whenever we engage in

applied learning, we really have to set that environment that both the facilitator has this

ethical code of conduct and the students do as well.

DanReeve That community of trust allows students to really com

Kerry-Ann: Yeah, it's so rewarding to get unsolicited feedback from students in emails where they

go, "That was one of the best classes I've ever had" or "I can't tell you how much I now

understand this conceptrdheories as opposed to when I haven't before" or "Kerry,

why don't we do more of this?" That's when I get to understand.

DanReeve So how do you celebrate their transformation?

Kerry-Ann: How do I celebrate their transformation?

DanReeve And out here let me stop for a second. I'll tell you my favorite quote. She said "I don't

do it enough" and it just, when she said that, I'm trying to remember, I'm sorry, I can't remember who it was. I thought, yeah, that's right. Just because you give someone a

grea

Kerry-Ann: They connect to you. So I try to give students. I try to say thank you as well, that

acknowledgement. I seehwere you're getting at. I do thrak students for their

engagement and because I think they do put themselves out there when we ask them to

do these things and we need to acknowledge it.

DanReeve I agree with you wholeheartedly. Any final thoughts that have percolated through?

Anything you want to add to this conversation? I mean, I know you've got a lot more to

add. We could easily have acond round of questions and another podcast.

Kerry-Ann: Yeah. I don't know. I think studen tenthusiasm drives your enthusiasm, so if you can

startRectoesomething that's exciting, their enthusiasm drives your enthusiasmíq"1"c+
